**A case report on misdiagnosis of a giant uterine leiomyosarcoma: Clinic and image challenges**

**Jila Agah, Sedighe Karimzadeh\*** and **Fateme Moharrerahmadi**  
Sabzevar University of Medical Sciences, Iran

**P**elvic masses are common findings in general gynecology. However, many imaging modalities are available and easy to accelerate the diagnosis; still some gigantic tumors are going to be neglected. Moreover, sometimes these tumors are erroneously reported as ovarian masses on imaging follow-up which can induce severe challenges for surgeon during operation. Herein we represent a huge uterine leiomyosarcoma mismanaged with incorrect diagnosis of dyspepsia for over two months and afterwards operated as misdiagnosis of ovarian mass reported in images.
