## Occult papillary thyroid carcinoma metastasis to the sacrum and the skull, unusual presentation, literature review

**Fatima S Jouhar, Asif Quadri and Sadir Al Rawi**  
Tawam Hospital, UAE

This case is representing occult follicular variant of papillary thyroid carcinoma (FVPTC) with large metastasis to the sacrum. Patient presented as pelvic pain post hemi-thyroidectomy, which was found to be metastatic to the sacrum. The patient is a 42 years old female post hemi-thyroidectomy for benign follicular adenoma presented with lower back pain associated with fever and sweating. A lytic lesion of the left sacral bone was found on the CT with biopsy showing metastatic carcinoma with morphology and immune phenotype of thyroid gland primary tumor proven to be FVPTC. The patient gave history of loss of vibration sensation on the ipsilateral lower limb. The patient had completion thyroidectomy with benign pathology. We also demonstrated full review of literatures.

### Biography

Fatima S Jouhar is currently working as Surgical Resident at Tawam Cancer Center, UAE.
