## Statistical analysis of lung cancer in India

**Prasad Balachandran**  
Anna University, India

Lung cancer in India has broadened in lengths and breadths as a public institution. This paper deals with the statistics of prevailing lung cancer estimates, its survivors and the affinity of lung cancer towards Indian nationals' lifestyle. The estimates are concluded based on direct and indirect inputs from list of hospitals and cancer institutes. The carried inputs were jotted down by SWOT analysis. Thus the lung cancer estimates in India are effectively reproduced.
