The nitrogen cycle in air, soil and water

Reza Pashaei¹ and Mortaza Gholizadeh²

¹University of Siena, Italy

²Curtin University, Australia

Nitrogen is the most important gas in nature because of some reasons. Nitrogen is the vital source for providing food for organisms and microorganisms. Providing this prominent source need to cycle for transferring the nitrogen for all the organisms in nature namely plants and animals in water and soil that this cycle called nitrogen cycle. This article mention to nitrogen cycle role in air, soil, and water.

Biography

Reza Pashaei is a student of Master of Chemistry at Siena University. Mortaza Gholizadeh is a Post doctoral student at Curtin University. He published more than 10 ISI articles.
