## **Technology's impact on the child welfare system: How technology is shaping how child welfare agencies do business**

**Matthew Wollack**

University of Michigan, USA

Child welfare is at a critical juncture in which technology can truly transform outcomes for the children, family, and workers. The next generation of child welfare demands must expect tools that provide greater efficiencies, streamlining

quality services to children and families. Agencies are constantly concerned with maintaining compliance, ensuring adequate staffing levels, and ensuring the highest quality of care. As state departments move forward in developing a Comprehensive Child Welfare Information System, it must be asked. What will child welfare look like in five years, in ten years? Noble child is answering those questions today. Our mission is to usher in the next Generation of Care Providers for Child Welfare. We provide the most advanced and tailored solutions in the child

welfare industry for both those providing and receiving care. Learn how Noble child helped Wolverine Human Services in Michigan provide services for the full continuum of child welfare and juvenile justices services. As a way of background, Noble child allows all state and private service provider operations to be maintained in one spot, removing silos of data and creating a frictionless workflow for the industry to improve how private agencies and government bodies administer care and treatment to children.
