

## Hard and soft tissue management for single tooth implant replacement in the esthetic zone

**Francesco Amato**  
University of Catania, Italy

The purpose of this lecture is to inform the clinician about the different treatment options to replace single anterior tooth in the maxillary arch with implant supported prosthesis. The treatment's goal is to achieve natural esthetic appearance. Various therapeutic modalities will be described and compared. Short and long term results will be showed and clinical guidelines will be given based upon clinical evidence and literature support.
