Vaccination campaign in Jordan versus broken primary health care centers

Zeyad S Bataineh and Sameer Kofahi
King Hussein Medical Center, Jordan

Statement of the Problem: New cases of polio, Measles and rubella. Began to appear in the Mediterranean region, including Jordan due to breakdown of primary health care system and a lot of children in Syria is definitely infected with these major diseases caused by the civil war. World Health Organization (WHO) adopted a vaccination campaigns in neighboring countries closed to Syria since 2-11-2013 to 21-11-2013 in order to control the spread of the disease through the reservoir (refugees) getaway from Syria to neighboring countries such as Jordan.

Objective: Control, prevention and eradication of polio, measles and rubella.

Method: A vaccination campaign for these major diseases (polio, measles and rubella) in the period from 2-11 to 21-11-2013 was carried out this campaign through the Ministry of Health Jordan (MOH), Royal Medical Services (RMS), United Nations Relief and Works Agency (UNRWA) and non-governmental organizations (NGOs) health centers across the Jordan.

Target Population: The campaign targets the vaccination children against polio for the age group of one day to five years, while the targeted immunization with vaccine of measles and rubella for the age group of six months to 20 years for all Jordanians and non-Jordanians residing on the land of the kingdom regardless of taking them to these vaccines earlier in the campaign.

Result: Total number of children and young people within the age group of the day and until the age of 20 years had vaccination (2,500000), among of those (56500) vaccinate by RMS as well as about (46000) measles and rubella, (10500) polio vaccine.

Conclusion: High vaccination coverage as well as a huge number of people from under the age 20 years they attended Ministry of Health, Royal Medical Services, UNRWA, and non-governmental organizations health care center in Jordan to get vaccination.
