

16th EUROPEAN NEPHROLOGY CONFERENCE

October 02-03, 2017 Barcelona, Spain

Simon Allen

Fine Treatment, UK

Thermo-balancing therapy opens new opportunities in nephrology to fight effectively with chronic renal diseases

Thermo-balancing therapy (TT) with Dr. Allen's therapeutic device (DATD) is a unique treatment method for chronic internal diseases of different organs, including kidneys. The therapy and device were invented by Dr Simon Allen about 10 years ago, and granted a United States patent as "Therapeutic device and method" and 2 clinical investigations in the Department of Urology at Yerevan Medical University on TT with DATD in men with enlarged prostate and chronic prostatitis have shown sustainable effectiveness. It was suggested that all chronic internal diseases have the same root and start at the capillary level due to pathological capillary activity. Under certain circumstances, namely triggers, capillaries can constrict with development of focus of micro-hypothermia in the affected organs tissue. This leads to another function of capillaries spontaneous expansion in this tissue. This increases the pressure in the area, which leads to a malfunction of the organ. Continuously repeat of this pathological activity of capillaries makes a problem chronic. It should be noted, that medication, acupuncture and other treatment options unable to eliminate the focus of hypothermia, therefore surgical procedures are widely used reducing quality of life. TT with continuous effect on the focus hypothermia eliminates the pathological activity of the capillaries, stopping the progress of chronic disease. This simple solution for chronic for internal diseases should be widely investigated by nephrologists. DATD is comfortable for people and Fine Treatment Company, UK, produces and distributes it worldwide to treat various chronic conditions.

Biography

Simon Allen obtained his PhD degree in Medicine in 1978. For over 14 years, he worked at and subsequently headed a hospital's Cardio-Vascular Department, and treated patients with renal diseases. He has authored many scientific articles on metabolic disorders, including those linked to obesity, kidneys, arthritis, cardio-vascular and gastroenterological diseases. He lectured medical doctors pursuing higher medical qualifications. He then devoted nearly two decades to further medical research into various chronic internal diseases. He has established Fine Treatment, UK, and he is the author of The Origin of Diseases Theory and the inventor of the effective devices which enable the Thermo-balancing therapy.
