March 12-13, 2018 London, UK

Dr Allen's device for kidney care by dissolving renal calculi naturally prevents people with kidney stone disease from the development of secondary high blood pressure or diabetes

Simon Allen
Fine Treatment, UK

Allen's therapeutic devices (DATD) that provides Thermobalancing therapy (TT) is a class 1 medical device, so it can be used by everyone at home. 2 thermoelements in DATD accumulate the body heat and become a source of energy. The application of these thermoelements to the back, to the projection of kidneys by DATD dissolves renal calculi gradually. This method for treatment of chronic internal diseases was granted with the US patent as "Therapeutic Device and Method". It is a fact, confirmed by different clinical investigations that extracorporeal shock wave lithotripsy (ESWL) have serious side effects that can end with the development of high blood pressure and diabetes. Kidney surgeries, even minimal invasive percutaneous nephrolithotomy (PCNL) can develop severe complication, including secondary hypertension. The only way to dissolve kidney stones without side effects is to use DATD. This new therapy is based on a new understanding of the origin of diseases. According to TT, all chronic internal diseases have the same root, the pathological activity of capillaries. These changes in the small blood vessels, the focus of hypothermia becomes a continuous trigger in the affected tissue, which gradually increases the pressure in the affected organ that leads to its malfunction. The clinical investigations confirmed the effectiveness of TT in 124 men with BPH and 45 men with chronic prostatitis. The collected data during the last decade has shown that TT with DATD has dissolved any type and size of kidney stones in all users. People usually forget about kidney stones within days. However, they should use DATD for several months, depending on the size of renal calculi. Thus, to avoid secondary hypertension and diabetes people with kidney stone disease should use DATD as the first line treatment.

Biography

Simon Allen has obtained his PhD in Medicine in 1978. For many years he was treating patients with chronic internal diseases, including various kidney problems: nephritis, nephrosis, chronic kidney failure and kidney stones, developing diets for them. Later he headed health clinic for the treatment of chronic internal conditions. Then, he devoted two decades to further medical research and developed Thermobalancing therapy® and Dr. Allen's Devices for chronic internal diseases, which received a patent in the USA, as "Therapeutic Device and Method". He is Director of Fine Treatment, United Kingdom, which distributes these devices worldwide.
