

4<sup>th</sup> International Conference on

# Nephrology & Therapeutics

September 14-16, 2015 Baltimore, USA

## Punit Gupta

Pt. J N M Medical College & GBG Kidney Care Hospital, India

### MAKE-D i.e Mobile Artificial Kidney Extended Devices

**Introduction:** The Mobile Artificial Kidney Extended Devices, also known as the MAKE-D, is a miniaturized dialysis device that can be worn like a jacket bag. It connects to a patient via a catheter. Like more sizable dialysis machines, it is designed to filter the blood of people whose kidneys are no longer working. Unlike current portable or stationary dialysis machines, it runs continuously on batteries and is not plugged into an electrical outlet or attached to a large water pipeline.

### Biography
