

# 20<sup>TH</sup> GLOBAL NURSING EDUCATION CONFERENCE

March 21-23, 2018 | New York, USA

## The influence of "disaster preparedness education" course on university students' disaster preparedness ability

Wang Lingying<sup>1</sup> and Hu Xiuying<sup>2</sup>

<sup>1</sup>Sichuan University, China

<sup>2</sup>West China Hospital, China

**Objective:** The objective of this study was to study the effect of disaster prevention education course on disaster preparedness ability of College students.

**Methods:** Forty-eight college students who took the course of "disaster preparedness education" were investigated with self-designed questionnaires to analyze their disaster preparedness ability and to analyze the changes in their preparedness ability before and after the course.

**Results:** There were no difference ( $P>0.10$ ) before class; after the two groups were compared with before class disaster preparedness abilities were improved significantly ( $P<0.05$ ); students' disaster preparedness ability scores were statistically significant after class ( $P<0.05$ ), their disaster preparedness abilities were improved.

**Conclusion:** The teaching form of "disaster preparedness education" is practical and has a positive impact on College Students' ability to cope with disasters. It is worth popularizing in more colleges.

### Biography
