Department of Surgical Nursing, Ege University Nursing Faculty, Turkey

The study was aimed to determine of the implementation status of the preoperative skin preparation in surgical clinics. Research was performed between the dates of 12th October 2015- 26th February 2016 in surgical clinics at a university hospital. Samples of the study consisted of 374 patients who had a planned surgery during this period. The researcher used the documents "Patient Introduction Form", a form for detection of the implementation status of the preoperative skin preparation in surgical clinics. The data collection form was developed according to literature findings. 52.0% (n=195) of the patients were men, 41.6% of the patients (n=156) primary school graduates. Most of patients (87.5%, n=328) had a shower before surgery. 60.8% (n=228) of patients did it the night before surgery and 61.6% of patients (n=231) had a shower with soap and water. Preoperative shaving of the surgical site was performed 68.0% of (n=255) patients. Patients were mostly prepared by shaving with a razor blade (43.5%, n=163). The conclusions of the research show that procedure of pre-operative skin preparation was used in surgical clinics.

Biography

Arzu Aslan is a PhD student at Ege University. She is also Research Assistant at the same university in Surgical Nursing Department since 2011
