**Supplier quality management in global supply chain; risks associated, quality issues, outsourcing, and other issues related with global supply chain**

**Hassan Mukhtar**

Concordia University Institute for Information Systems Engineering, Canada

The paper is about the supply chain management with respect to quality at global level. The issues in supply chain management at global level have been detailed and outlined in the paper. The most notable issues have been risks associated, quality issues, outsourcing, and other issues related with global supply chain management. The concept has been divided into time phases that start from the time prior to 1990 to present. The paper states that integration and collaboration are very important in global Supply chain management issues. In order to be successful and efficient, the paper proposes that global supply chain management must be integrated, and global perspective must be taken in order to be successful.

**Biography**

Hassan Mukhtar is a PhD student in Information and Systems Engineering at Concordia University. He has immense interest in global supply chain. His articles are published in reputed publications like Research gate, and Inderscience.
