Distributed and Decentralized Artificial Intelligence and IoE

The Innovation of high technology does not make most of human being's utopia life. However, like as nature, if Internet of Everything (IoE) has independent and unique intelligences, and connected peer to peer, behaviour securely then this kind of technologies can trigger a revolutionary and paradigm change that can contribute to most of human beings utopia life. Now, we are facing a very critical season, how to directing the AI and IoE technology.

Biography

KyuTae Ahn, is one of the early supporter of several block chain project from 2015, Huge communication with blockchainer and block chain communities. He was made cryptography chip (SoC) in 20years ago, when he was a students of master course. It will be the base science of securities and further block chain researches. Especially, He is interested on applying block chain technologies to IoT, which is very light sensor devices, and to Fair Creative Contents Industry with backend platforms. He researching and developing big themes block chain smart contract application machine on IoT and XR(eXtensible Reality) Streaming platforms, which is Super Ultra High-resolution Video contents will be tiled , cognitive and weighted streaming and it will scalable and more effective bandwidth usage than current streaming systems. Its' streaming base on adaptive streaming, which MPEG-DASH and HLS. He is also a patent owner, developer, miner, and block chain enthusiast. Before Founding His Company , trust farm, He has 18 years of expertise as a global broadcaster of integrated development; product manager of UHD streaming service at LG electronics; and co-operation with BBC, Ziggo, Netflix, YouTube, and CJ.
