# **RESTORATIVE & ALTERNATIVE MEDICINE**

November 06-07, 2017 | Vienna, Austria

## **Advances in intestinal hyperpermeability and SIBO**

**Corey Schuler**

Integrative Therapeutics, USA

**I**ntegrative practitioners are increasingly accustomed to diagnosing and treating small intestinal bacterial overgrowth (SIBO) and intestinal hyperpermeability as clinical entities. Both of these conditions are at the heart of many other known and named conditions. However, despite our ever-increasing understanding and appreciation, both SIBO and intestinal hyperpermeability require highly complex protocols, are often difficult to resolve, and prone to recurrence. Participants will learn to work with patients for whom the elimination diet has failed, patients who have increasingly difficult symptoms to manage, and those who cannot tolerate conventional approaches. The focus of our discussion will be on the dietary management of moderate to severe gastrointestinal and digestive impairment.
