October 17-18, 2018 | Las Vegas, USA

Low frequency sound stimulation therapy as an non-invasive, alternative approach to the treatment of pain, inflammation & circulatory conditions

Kevin Longoria

Wave Therapy LLC, USA

Wave Therapy (“WT”) is a FDA Class I low frequency sound stimulation device that has no known side effects or contraindications. It has been shown to provide immediate & quantifiable improvements in various health, wellness & performance biomarkers. Wave Therapy has been granted three U.S. Patents for the treatment of 1) circulatory disorders, 2) inflammatory musculoskeletal connective tissue disorders and 3) blood-manifested medical disorders. During a Wave Therapy session, up to six clients are arranged in a circle around a WT unit, which is a transducer (speaker) immersed in water emitting omni-directional acoustic pressure waves at a very specific frequency. These sound waves, which are accelerated through the water, can stimulate every cell in the body and increase systemic nitric monoxide production for improved oxygen and nutrient rich blood flow throughout the entire body. Wave Therapy offers onsite medical-grade diagnostic testing including heart rate variability, photoplethysmography (PPG) & bioelectrical impedance analysis to provide a data-driven approach to treatment prescription and objective progress monitoring. Furthermore, university research has found that 86% of participants reported quantifiable improvement in pain perception following a single 30-minute WT session. Wave Therapy may therefore represent a non-invasive, non-pharmaceutical & safe approach to the management of pain. In addition to its treatment locations in Scottsdale, AZ and Las Vegas, NV, Wave Therapy is also the exclusive distributor of Wave Therapy devices in the U.S., Canada, Mexico & the U.K.

Biography

Kevin Longoria has completed his Masters of Science in Kinesiology from AT Still University and is a certified Clinical Exercise Physiologist. In addition to his position as Diagnostics Consultant for Wave Therapy, he founded a mobile medical diagnostic testing company in Arizona and currently holds the position as Chief Science Officer for two progressive healthcare companies in Scottsdale, Arizona. He has experience working with populations ranging from severe neuromuscular diseases to Olympic athletes, including his recent position as Lead Physiologist for a World Champion UFC fighter.
