

4th International Conference on

ASTROPHYSICS AND PARTICLE PHYSICS

December 03-05, 2018 | Chicago, USA

Cosmology

Arthur Daghlyan

Yerevan State University, Armenia

I will come to terms with the creation of the universe, its evolution and its causes, space and time, the roles and the meaning of homo sapiens, the gravitational interaction (soon to come to the other interactions), the galaxies and the black hole. This idea includes responses to questions that have been up-to-date for centuries. Those questions received wise, conscious and partially true answers on the one hand, senseless and worthless answers on the other hand, and this overall information package in the ongoing flow of time brings us closer to the real answers, and we have to give appropriate answers to these questions until the time isn't interrupted once again. I will come to terms with the creation of the universe, its evolution and its causes, space and time, the roles and the meaning of homo sapiens, the gravitational interaction (soon to come to the other interactions), the galaxies and the black hole. I will address all these questions without applying physicomathematical formulas and proofs; I will simply define this theory by bringing philosophical and logical conclusions, using only paper and pen. I foresee the further development of the theory within scientific interest and offers. Mind, space and time, these three components comprise the wonderful and mysterious world, the absence of one of them would make the existence impossible and senseless.
