## The planet Earth

The planet's atmosphere plays a key role for heat preservation, while it is affected by planet's mass and E/M field. The world's electric production has almost tripled in the last century. Along with Earth's inherited motion, the electrification of our home planet has increased its E/M field, which causes global re-climate/gas retaining or warming. It is evidenced by the tremendous increase of the Earth's lightning/storms in the past twenty years. The global warming is not about temperature or sea water upsurge. It is all about the accelerated water lost! It is evidenced with glaciers liquefying. Ice serves an essential H<sub>2</sub>O preservation by slowing its evaporating for any planets/asteroids. Our earth has already lost a quarter of its H<sub>2</sub>O. The current trend of our civilization is to accelerate rather than decelerate earth's inevitable desertification-a hastened suicidal process committed by humans to eradicate humans entirely. To save our oasis planet for next generation, I have envisioned a roadmap for cosmos reconstructive engineering known as "global and regional environment catastrophe prevention and restoration or GRE-CPR" which is frequently dubbed as "Earth CPR". Earth CPR focuses on planet's waste disposition and recycling. Similar to your hospital visit, a simple and straightforward physics/modern medicine has been developed to preserve oxygen and water for your malfunctioned organs. It is now a 911 calling for the birth of our new space industry for your dysfunctional planet.

## Biography

Edwin Zong has completed his Medical Degree from Shanghai University of Chinese Medicine and New York College of Osteopathic Medicine. He has completed his specialty training in Internal Medicine from KMC/University of California, Los Angeles. He is the Medical Director of Oasis Medical Group Inc. and Laser Neutrino Annihilation Synergistic Applicator LLC, USA. He has published more than 20 papers in reputed journals.
