# BRAIN INJURY & NEUROLOGICAL DISORDERS

April 10-12, 2018 | Amsterdam, Netherlands

## Q-EEG analysis as foundation for neurofeedback treatments on the neurologically disordered patients

**Lena Ehrhard**

Institute for EEG-Neurofeedback Munich, Germany

New techniques make writing Q-EEG possible, especially ambulant treatment for severe affected patients in hospitals or at home. On this foundation is a grounded and progressive neurofeedback therapy in nearly everywhere possible. Patients who couldn't take part in treatments due to mobility reasons can now do so. Case by case examples (locked-in, stroke, pain disorders) will demonstrate appraisal, methods and the betterment of the patient during the ambulant neurofeedback therapy.

### Biography

Lena Ehrhard successfully completed her apprenticeship as Occupational Therapist at the Rhön-Akademie in Schwarzerden/Germany in 2002. She also finished her professional training on Psychic Trauma Therapy in 2012. As a co-partner of the health care center in Rotenburg an der Fulda/Germany, she is currently working as a Neurofeedback Therapist, using a 19-channel-discovery-system, trained by IFEN, Munich/Germany.
