

7th International conference on

Cosmetology & Beauty R&D & Expo

July 13-14, 2018 | Toronto, Canada

Liposuction with lipomatic and superior techniques

Reza Orouji

University Hospital of Tivoli, Iran

I have been working with this device for 5 years and I've done a lot of surgery with this device. Here I want to talk about this device and practice techniques and examples before and after the operation photos. The Nutational Infrasonic Liposculpture is a variant of the vibro lipo aspiration. N.I.L.[®] technique is based on a movement of Nutation, which enables the fatty tissues to be removed while respecting the other tissues. This will make the postoperative shorter and less painful for the patient. This specific movement will be used to infiltrate as well as to aspirate the fat. As the infiltration is the key point in liposculpture, the best the fat is infiltrated, the best the fat is prepared for the aspiration without complications. The nutation will create an emulsion of the fat, which will break up the fatty cells while respecting the tissues (no wrenching). After this step, the emulsified fat can be gently aspirated, while considerably reducing the bleeding, the risks of oedemas and bruises. The aspiration is very selective. The infrasound (low frequency: lower than 20hz) is generated by the nutation beatings and will act as a body anaesthesia on the treated area, which will make the surgery and the recovery more comfortable for the patient. In opposition with other techniques, the infrasound effect acts well over the canula tip. The infiltration is then faster and spreads much better (homogeneous infiltration). I use my own techniques for my work, which results in better and better results and in the video I show, I'll describe these techniques to you. Also, briefly about the superiority of this device over other similar devices and techniques that cause excellent results, as well as my own experience of fat transfer to the breast, buttock and face.

Biography

Reza Orouji is an Iranian medical Doctor. He graduated in 2003 from Medical University of Medical Sciences at Mazandaran University of Medical Sciences in Iran. He has been involved in medicine for 15 years and now he has engaged in cosmetic surgery for 10 years. At the 2016 IMCAS Scientific conference, he was invited as a speaker for Lift Faces and as an APTOS Company he is engaged as a trainer. He is the inventor of the electrical device for the treatment of impotence, which he has undergone, and he waited for the answer to be registered as a patent.
