Benign prostatic hyperplasia thermo balancing therapy with cost effective Dr. Allen's physiotherapeutic device reverses prostate enlargement

Thermo balancing therapy® (TT) and Dr. Allen's therapeutic device (DATD) is a completely new treatment for benign prostatic hyperplasia (BPH). Nearly one in four men will suffer from BPH over their lifetime. BPH isn't a life threatening condition therefore; it should be treated safely in the first place. Unfortunately, all BPH drugs have serious side effects. At the same time Dr. Allen's Device has no adverse side effects. DATD provides therapy, which is based on a new understanding of the origin of diseases, which underlines that all chronic internal diseases have the same root, the pathological activity of capillaries. As a result of changes in the small blood vessels, the focus of hypothermia becomes a continuous trigger in the affected tissue, which gradually increases the pressure in the affected organ that can lead to this problem. A natural thermo element in DATD accumulates the body heat and becomes a source of energy itself. DATD applies a thermo element to the coccyx area, eliminating the focus of hypothermia. The 10 year empirical data show that men around the world, in different climates have reversed prostate enlargement by using Dr. Allen's Device as mono therapy. A clinical trial of TT with DATD in 248 men with BPH demonstrates that the prostate volume decreased in the treatment group 124 men from 45.1 mL to 31.8 mL and urinary symptoms score from 14.3 to 4.7. There were no changes in 124 men with BPH in the watchful waiting control group. Thus, TT is an effective tool for enlarged prostate that reverse the enlargement without adverse side effects. The cost of DATD is less than \$200 with guaranteed delivery, compares favorably with the cost of conventional treatments for BPH. Furthermore, TT with DATD can be used as preventative measure for BPH development and progression.

Biography

Simon Allen has obtained his PhD in Medicine in 1978. For over 14 years he worked and subsequently headed a hospital's cardiovascular department and treated patients with renal diseases. He had authored many scientific articles on metabolic disorders, including those linked to obesity, kidneys, arthritis, cardiovascular and gastroenterological diseases. He has lectured Medical Doctors pursuing higher medical qualifications. He then devoted nearly two decades to further medical research into various chronic internal diseases. He has established Fine Treatment, UK and is the author of the origin of diseases theory and the inventor of effective physiotherapeutic devices which enable the thermo balancing therapy.
