Applied AI for large organizations. How to find what you need, build and scale it

Angela Maragopoulou

Vodafone Group Services Germany, Germany

Large organizations are intimidated by the widely available AI Tool choices, the lack of the relevant industry understanding of the business problems and needs to solve and the complete lack of relevant organizational design and operating model. The session will address practical guidance from real use cases on setting up the proof of concept, pilot and delivery approach for AI, on identifying the AI translator roles and building the capability to identify the right business problems to solve, on the importance of a data strategy and its contents and finally on how to form the capability and organization able to scale AI in an applied manner. Last but not least, it will address the KPIs which can determine measuring not only success but also deviation of it before reaching points of no return.
