Cell determination to what size to grow and mystery of Golgi apparatus

Kunal Joon

University: NIIMS greater Noida

DNA ARCHITECTURE THEORY: Zygote contains a dna as a architecture and form cells of ectoderm ,mesoderm and endoderm

DNA contains a gene and act as a architecture for cell. It act as a digital clock for the cell division:

1. DNA base pair supplies energy to the cell for division as when the cell divides before cytoplasmic division chromosome divides and during chromosome division a huge amount of energy is released
2. This energy is supplied for division of organelle and accurate amount of energy is released by DNA for cell to divide it is during S phase
3. During meiotic when chromosome pair up then energy is released .

Treatment of cancer (at any stage)

Cancer can be treated at any stage by introduction of gene leading to deactivation of oncogenes through. Antibodies or any other method which leads to destruction of cancer cells and can lead to cure of cancer at any stage.
