Chakras' energy deficiency as one of the causes of pulmonary thromboembolism**Huang Wei Ling***Medical acupuncture and pain management Clinic, Franca, São Paulo, Brazil*

Introduction: Pulmonary embolism and venous thromboembolism is the third major cause of cardiovascular deaths after myocardial infarction and stroke. They mostly are originated in pelvic veins and lower extremities.

Purpose: the purpose of this study is to demonstrate that patients that had suffered from pulmonary thromboembolism has chakras' energy centers deficient in energy, leading to the propensity to have stagnation of Blood and the treatment of this lack of energy in the chakras' energy centers using highly diluted medications according to the theory Constitutional Homeopathy of the Five Elements Based on Traditional Chinese medicine can be one important option for the prevention and treatment of patients with this condition.

Methods: through one case report of 80 year-old man with history of tabagism for 50 years, had diabetes, hypertension, hernia inguinoescrotal, with history of dyspnea and went to emergency room and they did diagnosis of pulmonary thromboembolism through rx ray. He did the treatment with anti-coagulant medication but still have dyspnea symptoms. He went to an acupuncture clinic in Brazil and the doctor measured his chakras' energy centers to evaluate his energy condition.

Results: the results of this measurement was that all his chakras' energy centers were completely deficient in energy, with the exception of the seventh chakra, that was normal, rated in eight. The doctor began to replenish his chakras' energy centers using highly diluted medications according to the theory Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine and crystal-based medications.

Conclusion: the conclusion of this study is that patient with history of pulmonary thromboembolism have chakras' energy centers deficient in energy and the correction of this energy deficiency using highly diluted medications can prevent the formation of venous thrombosis and pulmonary thromboembolism.

Biography
