

## 2nd International Conference on LUNG DISEASES

August 27, 2021 | Webinar

**Chronic cough as initial manifestation of mediastinal lymphoma in woman****Huang Wei Ling***Medical acupuncture and pain management Clinic, Franca, São Paulo, Brazil*

**Introduction:** Primary mediastinal lymphoma is a B-cell lymphoma variant that is derived from thymic medulla B cells. It represents 2 to 4 % of non-Hodgkin lymphomas and occurs most in young women. It is characterized by diffuse large B-cells and sclerosis.

**Purpose:** to demonstrate that patients with chronic cough in the skin and cough can be one initial manifestation of mediastinal lymphoma in woman.

**Methods:** through one case report, 42 years-old woman with history of cough and chronic cough in 2004. She went to the emergency room and the physician asked for the lung x ray that resulted in enlargement of the mediastinum and little pleural effusion on the right lung. Computed tomography of the thorax showed pleural effusion on the right lung and enlargement of the mediastinum. It was done biopsy of the mediastinum lesion for four times in the same procedure and only in the fourth biopsy of the mediastinum, they found Hodgkin disease.

**Results:** she was treated with chemotherapy for 12 sessions and was very successful in her treatment and it was not necessary the use of surgery or radiotherapy (2005). The patient went to acupuncture clinic recently (2021) and the physician found that all her chakras' energy centers were in the lowest level of energy. It was orientated her to avoid some foods such as dairy products, raw food, cold water and sweets. The second group of foods that was orientated to avoid was fried foods, chocolate, honey, coconut, alcoholic beverages, etc. and avoid coffee, soda and mate tea. The physician began to treat her using auricular acupuncture (mustard seeds) and apex ear bloodletting. The second tool used was the use of homeopathy medications according to the theory Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine, to replenish all these energies that was causing immune suppression in this patient, that was not treated in the first treatment she received in 2005.

**Conclusion:** patients with chronic cough and cough can be one clinical manifestation of mediastinal lymphoma and the correct investigation is very important to do the correct diagnosis and treatment of this case.

**Biography**

Huang Wei Ling, born in Taiwan, raised and graduated in medicine in Brazil, specialist in infectious and parasitic diseases, a General Practitioner and Parenteral and Enteral Medical Nutrition Therapist.
