**Intelligence of human cells can tell us what happens to the body of a human****Nabeel Z. Al-Hazeem**

Ministry of Education, Iraq

The human is the most important creature in this great universe. This great human organs of the body and the cells, it is threatened the existence of diseases that afflict him, and we know for sure that this great body the ability to resist most diseases. It is known that some diseases triumph over this great body and an example of this is cancer, so in many cases their lives end of many humans because of the disease. My study today is a simple report and a call to all researchers to turn to the important thing that is the intelligence of human body cells, which I believe to tell us of any damage that tries to harm this body. The body that tells us when it needs to water by thirst state, moreover, why do we choose a specific type of eating or a specific fruit can tell us about cancer early, all of this is a translation of what the body needs. So we need to listen and translate what are cells need to understand much of what happens to the body, and also very early detection of most cancers that occur to the body.

**Biography**

Nabeel Z. Al-Hazeem has completed master study from Universiti Sains Malaysia (USM), Malaysia. He has 6 publications that have been cited 10 times and has shared a chapter in book above 648 download with one cite, and his publication H-index is 2 and has been service as a reviewer of reputed Journals in IOP.
