Is The Mandatory Implementation of a Passport for COVID-19 Vaccine Reduce the Transmission or Not?

Huang Wei Ling

Medical Acupuncture And Pain Management Clinic. Franca, São Paulo, Brazil

This theme the author will discuss the various explanations that was used or not to implement this kind of rules in Europe and in many countries nowadays. Purpose; to demonstrate that using only this type of measures to control the spread of the virus will not be reducing the incidence of the infection because the author is demonstrating that the type of population that we have nowadays are not immune competent but immune deficient in energy, that will compromise the formation of antibodies for SARS-CoV-2 after receiving the vaccines and also, there are other variants and strains that only one vaccine cannot prevent all forms of SARS-CoV-2.

Conclusion: the conclusion of this study is that the implementation of universe vaccination is not based on studies very well done and are based on studies that have no conclusion yet. According to the author, the vaccination will not control the widespread of the SARS-CoV-2 infection due to the immune suppression status of our population nowadays, induced by the chronic exposition to electromagnetic waves and affecting our energy and immune system, leading to less response to vaccines nowadays. The use of other forms of measurements to increase the immune system of the entire population nowadays, such as the use of highly diluted medications such as homeopathies, increasing the vital energy of the population, that is very low nowadays, is the major importance, to treat the cause of the problem and not just treating the symptoms, that is the SARS-CoV-2 infection.

Biography
