

4th Global Meeting on

Plastic, Aesthetic and Reconstructive Surgery

November 07-08, 2019 | Frankfurt, Germany

My experience in managing grade 10 difficult Primary and revision SRP

Mohamed Saad

KAMC Makah Almokarama, Saudi Arabia

During the last decades a new sophisticated level of nasal surgery has emerged aesthetic reconstructive rhinoplasty by Burget 1994 and Menick 1999 to active a true aesthetic rather than mere improvement natural results this need surgical skills including the use of rib cartilage grafts, this is not a simple primary SRP or revisionone.

Introduction: The three Cs cleft, cocaine, and catastrophes to realize the difficulty of both the problems and the correction. I will discuss 2 cases with cleft lip nose and 3 cases with large septal perforation repair and 5 cases with (catastrophe) severely crooked nose.

Material and methods: The 3Cs: cleft nose, large septal perforation cases, and catastrophe cases we must realize the difficulty of the problem and the difficulty of correction, I will analyse the cases and I will present my plane and, photo pre and post-operative and videos for all the selected cases.

Conclusion: The three Cs- Clefts, large septal perforation with saddling, and catastrophes cases need to analyze the difficulty and put the plane for a high possibility in using a rib cartilage graft for reconstruct and put the final aesthetic touch with DCF

Biography

Mohamed Saad works at KAMC in Saudi Arabia.
