2020 Announcement of International Conference on Neurology December 10-11, 2020 | Dubai, UAE

Peter Silburn

The University of Queensland, Neurology, Australia, E-mail: p.silburn22@uq.edu.au

Neuroscience (or neurobiology) is a concern with the scientific study of the structure and function of the nervous system. Neurobiology is an interdisciplinary branch of biology, which combines anatomy, physiology, molecular biology, developmental biology, mathematical modelling, cytology, and psychology to understand the fundamental and emergent properties of <u>neural circuits and neurons</u>.

Neuro-oncology is a unique, developing neurologic subspecialty that combines many aspects of neurology with those of cancer biology. The Neuro-oncologist is expert in both the diagnosis and management of primary brain tumors and neurologic complications of cancer. A career in Neuro-oncology presents opportunities to utilize a multidisciplinary team approach and the application of cutting-edge technology toward patient treatment while providing compassionate patient care. Neuro-oncology can trace its modern origins to the 1970s, when the first therapeutic trials were begun. The treatment and management of primary brain tumors is now a rapidly evolving field.

Neurology involves the study of clinical diagnosis and treatment of the peripheral, autonomic and central nervous systems. Neurology is a branch of medicine that deals with different diseases and disorders of the nervous system ranging from Alzheimer's. Neurologic disorders are wide-ranging and they have various causes, complications, and outcomes. All neurological disorders encompass the brain, spinal column or nerves. Symptoms of the disorders depend on where damage occurs. Different areas that monitor movement, communication, and hearing, vision, cognitive (or thinking) can be affected. For example, ADHD tends to have greater effects on behaviour whereas cerebral palsy tends to have more physical symptoms. Many disorders result in additional needs requiring life-long management.

Neurology meet 2020 is an event that aims to explore "Innovations, Novel Treatment Approaches and Advance Therapies in Neurology and Neurosurgery" scheduled to be held on December 17-18, 2020 at Dubai, UAE. The meet is expected to provide great scope for interaction of professionals working in the field of Neurology. Neuroscience. Genomics. Molecular Neurology, Geriatrics Neurology, Neuro-Oncology, Neuroradiology, Neuro-endocrinal Immunology, Neurodegenerative <u>Disorders</u>, on a single platform.

• Dr. Peter Silburn from The University of Queensland, Queensland presented a session talk on "The treatment and research of Parkinson's disease and treatment of neurodegenerative diseases".

ME Conference is glad to schedule the 3rd Neurology and Neurosurgery Congress on December 10-11, 2020 at Dubai, UAE.

Meet the future as it pledge to Neurology and Neurosurgery by bringing the World wide Physicians, Medical professionals, Nurses, Neurologists, Neurosurgeons, Neuro-Oncologists, Neuropathologists, Radiologists, scientists, Professors, Academic Scientists, Industry Researchers, Scholars and Specialists to Dubai, UAE.
