

## 2020 Awards Announcement of 7th International Conference on Wireless and Satellite Communication (ICWSC 2020) May 21-22, 2020 | London, UK

Zuriati Ahmad Zukarnain

Professor, Computer Science and information Technology, University Putra Malaysia, Malaysia  
, E-mail: [zuriati@upm.edu.my](mailto:zuriati@upm.edu.my)

[7th International Conference on Wireless and Satellite Communication](#) (Wireless Conference 2020) is going to become a huge platform to all the Engineers, Researchers, Innovators, Scientists, Professors, Academics students, and the expertise in the field of Wireless to share and explore their views on their research and case studies with the global experts. The conference is going to be held during May 21-22, 2020 at London, UK which revolves around the theme "Future of Communication in Today's World".

We are pleased to welcome you to the "[7th International Conference on Wireless and Satellite Communication](#)" after the successful completion of the series of wireless Congress. The congress is scheduled to take place in the beautiful city of London, UK on May 21-22, 2020. This Wireless Conference 2020 conference will provide you with an exemplary research experience and huge ideas.

The perspective of the Wireless Conference 2020 is to set up new research to help people understand how new techniques have advanced and how the field has developed in recent years

Wireless communication have become an integral part of each other to provide wireless communication to common man that helps people located in any part of the world communicate easily. Wireless communication technology transmits information over the air using electromagnetic waves like IR (Infrared), RF (Radio Frequency), satellite, etc. For example, GPS, Wi-Fi, satellite television, wireless computer parts, wireless phones that include 3G and 4G networks, and Bluetooth. This white paper summarizes the importance of Wireless and Telecommunication, their advantages and disadvantages.

A communications satellite is an artificial satellite that relays and amplifies radio telecommunications signals via a transponder, it creates a communication channel between a source transmitter and a receiver at different

locations on Earth. Communications satellites are used for television, telephone, radio, internet, and military applications. There are over 2,000 communications satellites in Earth's orbit, used by both private and government organizations.

Communication is the production and exchange of information and meaning by use of signs and symbols. It involves encoding and sending messages, receiving and decoding them, and synthesizing information and meaning.

Communication permeates all levels of human experience and it is central to understanding human behaviour and to nearly all public health efforts aimed at fostering health behaviour change among individuals, populations, organizations, communities, and societies.

To enhance the field and make people aware of it. The organizing committee decided to hold a conference. Wireless Communication is one of the fast growing and developing areas of Technology.

People who have missed attending the past conference are most welcome to present your research ideas at the [Wireless Conference](#) 2020. This conference will help you improve networking with eminent people in the field of Communication
