Consultants with national and international reputations in numerous fields can address the most recent tips, therapeutic approaches, recent trends, etc., in vessel medication. To boot, attendees can find out about recent trials being practiced that area unit possible to influence future practices.

**Market analysis:** Number of people suffering from thyroid disorders continues to rise each year. As reported by the World Health Organization (WHO), on an average 1 out of every 13 people more specifically 20 million to 750 million cases are diagnosed globally with thyroid diseases each year. There are more than 250 million cases with hyperthyroidism globally. Around 60% of the populations effected with thyroid disorder are uncaring of the situation. Female population is 5-6 times more likely to develop a thyroid disorder.

Millions of people are suffering and also trying all kinds of diets, pills, and treatments to clear their mental fog, to boost energy and lose weight.

Unfortunately, they will all fail unless they learn how to heal the underlying thyroid issues.

Thyroid cancer is rising faster in Pennsylvania than in the rest of the United States. Thyroid cancer is now the seventh leading type of cancer in the nation. It typically occurs in young women and is projected to become the third most common cancer in women by 2019. Papillary thyroid cancer, responsible for most of this increase, is very treatable and has a 95 percent 30-year survival rate.

In Pennsylvania, white women had a 25.5 percent rise in thyroid cancer, followed by black women at 17.7 percent; white men at 8 percent; and black men at 3.8 percent. The fastest rate of increase over time occurred in black women. Papillary thyroid cancer had the largest increase in cancer type -- an 8.8 percent yearly change -- followed by anaplastic thyroid cancer at 4.2 percent and follicular thyroid cancer at 1.4 percent. Tumors confined to the thyroid at diagnosis increased 8.5 percent per year, while those that spread regionally outside the tumor increased by 7 percent. The two trends were not parallel, indicating that the greatest increase has been among tumors localized to the thyroid at diagnosis.

**Key highlighting Sessions:** Thyroid Pathophysiology, Diagnosis and Clinical Evaluation, Clinical Studies Case Reports, Nutrition & Supplements, Thyroid Cancer: Therapy & Treatment, Parathyroid: Treatment & Therapy , Thyroid Disorders: In Children, Teens and Adolescents, Thyroid Surgery & Care, Thyroid Challenges & Improvements, Thyroid Therapy: Medications & Remedies
