

Approach towards a Digital Clinic

Doepp Manfred*

HolisticCenter, Haupt St., Abtwil, Switzerland

Introduction

Our future will be digital or it will not be. This is what we could say if we extrapolate the existing tendencies and trends. Of course we all love the analog world, e.g. that of nature, biology and all living beings. However, we should have no illusions: in the next few years, the current changes in reality will continue and take more and more serious forms.

Artificial Intelligence (AI) is waiting. "1984" will become our reality, a surveillance state accompanied by a virtual reality, a pseudo-reality. Children will consider the virtuality on their screens to be more real than the material reality. To get out of the game, the entire Internet would have to be paralyzed (e.g. as a result of an electromagnetic pulse "EMP" by a huge solar flare).

These developments also include the official version of a future digital clinic. On a card, a chip or a cellphone App's all information about us will be stored, including data about our behavior, accounts, vaccinations, therapies and diseases. Something similar is already in place in China. Those who refuse to comply will receive sanctions in the form of loss of freedom and rights. Those interested in this will be able to dispose of them, i.e. of our examination results and diagnoses (just like bank data, cell phone data, fully automated household, self-driving cars, etc.). The complete networking in "Big Data" is imminent and will then be available to every clinic. We can hardly imagine what high-performance computers are already able to and what they will be able to perform in the future as quantum computers. We have contrasted this with our own version of the digital clinic in contrast to this.

Topics

For healthcare, we have two qualifications that are linked to the timelines in our HolisticCenter health center. They include the application of the internet and digital communication in medicine as well as the integration of computerized homeopathy. Homeopathy is accepted and integrated in the health care system in Swiss health care. A patient does not have to appear in person for this, his or her data (including photo or DNA/blood drop) are sufficient to guarantee an unambiguous identification.

Quotes from the "Confidential Swiss Letter" of October 4, 2016, "The Internet is about to begin a new triumph of its technology. From today by 2020, the digital health market will explode to over 200 billion

dollars. With the initiative "Horizon 2020" initiative, the EU is offering 600 million euros for the digital future of Europe. The digital analysis of health data leads to an individual medicine for the patient without consulting doctors."

With our methods, we are striving for two goals, a) an individualization and b) an objectification. Both of these are, despite all the soapbox speeches in conventional medicine, not standards. Instead of an individual medical decision-making, there are schemes: the so-called evidence-based medicine=EbM, based on guidelines; or an irrationality, the so-called authority-based medicine.

We want to change this in a positive sense. One can certainly predict that parallel to the transformation of industry into the status 4.0, information technology (IT) will also take over in medicine as well, since it controls far more information and its meanings than a doctor's brain, and much faster. Today's common - quite primitive - medicine of antagonists and blockers will be overtaken by IT. The MedBed will come. However, the problem remains that the studies on which the IT statements are based are largely influenced or distorted by the pharmaceutical industry.

Corruption has also found its way into this and the Cochrane Collaborations, which monitor the worldwide scientific publications, have a lot of work ahead of them [1].

The ET entity CoBra writes about "The pharmaceutical industry was created by the darkness for a few reasons - first, to extract more money from the people who were artificially made sick. Second, to distribute them (the pharmaceuticals) into the human body in order to create stress in the biochemical systems, which prevents the raising of the vibration frequency [2]. It is true that certain medicines can help in certain cases to alleviate some symptoms of a particular disease, but in the vast majority of cases, disease is a manifestation of certain internal blockages, or a manifestation of all the artificial intrusion into the human body. The new medicine, which is being born on the whole planet right now, increases the vibrational frequency of man and the relation of human consciousness to the physical body. The key to restoring health and the overall energy here is the plasma level."

What we do in our center

We create cause-related online diagnoses and complete them with online therapies. We use the computerized and advanced

bioresonance system TimeWaver® which goes into resonance with the individual information patterns of the patient in the global information field via a Kozyrev mirror and two entangled quantum random number generators [3-5].

The earthly representation of the information field is the Akasha-chronicle, a holographic quantum field with unlimited capacity. It contains all the information concerning the souls (deeds, thoughts, feelings, motivations...) of all their incarnations. The healing themes or measures, which prove to be important for the patient, are transmitted as digital frequency patterns via quantum teleportation to the patient, i.e. as a "remote treatment" [6].

This method is independent of space and time. The patient also receives his results as E-mail attachments, so that he can deal with the contents.

The information field

The basics of the TimeWaver® systems about the consciousness and its interaction with matter are found in quantum physics and depth psychology. The connection between the two follows the German physicist Burkhard Heim and his postulated information field [7, 8]. B. Heim developed a 12-dimensional cosmological model. It contains: d1-d3 = matter, d4 = time, d5-d6 = energetic regulation field, d7-d8 = global information field, d9 = free human will, d10 = phantasies, d11 = cosmic consciousness and d12 = the source.

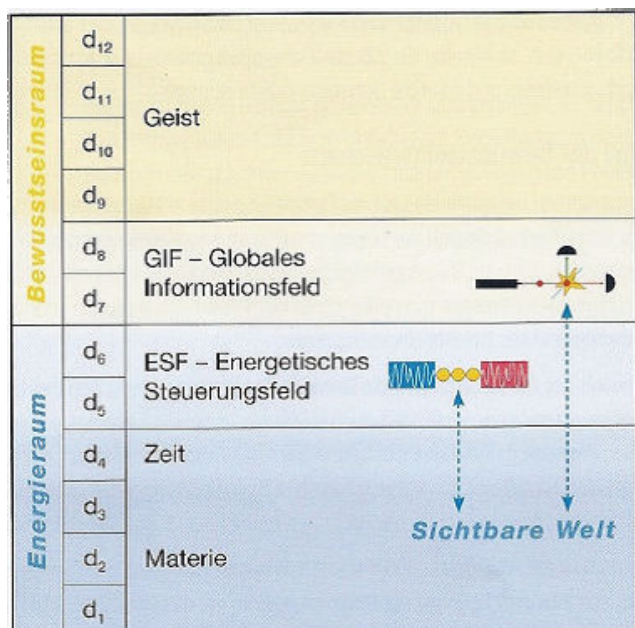

Figure1. The 12 dimensions of Burkhard Heim

Digital Homeopathy

No medical field can be better optimized by IT than homeopathy, because it is systematized and works on the information level (d7). In it, the diagnostic basis is the repertorization procedure [9, 10]. Repertory software can be used to facilitate the search for the identity of the simile [11].

The software of the TimeWaver® is not limited to homeopathy, but contains more than 1,000,000 digitalized information about

pathologies on the one hand and remedies on the other. Their correspondences and themes on levels d1 to d8 can be identified.

Criticism and limitations

In the field of testing methods, there is generally an antagonism between sensitivity and stability: the more sensitive a method, the less stable or reproducible it is. The here described surveys of the information field are very sensitive. In order to guarantee the necessary degree of reproducibility, one criterion must be added: the plausibility. It should be given by the user who, on the basis of his or her experience, sorts out improbable results based on his experience and demands.

With it it is also clear that this system could be fully automated, but this should not be aimed at, since there are weaknesses with regard to reproducibility. The consciousness of man with its openness to intuition, conscience and ethics is irreplaceable. This is what the producers of artificial intelligence devices have also had to realize. The information field is not a simple computer memory, but is subject to the cosmic-divine laws. Egocentric questions, which contradict the divine laws, are answered in an absurd or wrong way. An example: with the help of the yes/no function one could detect the upcoming lottery numbers. This is completely egocentric, the results will be wrong. If a user inserts in a similar way his expectations or doubts, the results will be inadequate, as well as if an IT-only program is active.

So a crucial point is that the user "human" has control over questions and answers, that he is neutral and has a stable consciousness. Only then the information field responds and works optimally and can guarantee a high level. Misuse of the system cannot be excluded, which is unfortunately true for almost all human knowledge, techniques, and technologies.

The future

It fulfills the expectation and description of the 6th Kondratieff-wave cycle for the period of integration of IT in the individual health care. Wikipedia: "Several candidates have been identified as technologies that will dominate the 6th Kondratieff-cycle: biotechnology, nanotechnology, psychosocial health and competence, mobile Internet [12].

As early as 1996, Nefedov, in his book "The Sixth Kondratieff" argued that the next fundamental innovation will take place in Healthcare [13].

This is a version of the medicine of the future that we are successfully using in everyday life and we present it here. It is a gentle, actually holistic medicine of vibrations and by means of vibrations/digital frequency patterns, which integrates modern information technological innovations. Of course, it cannot replace symptom-related emergency medicine or surgical interventions, but the emphasis is on finding and treating the causes of disease, preferably as prophylaxis and prevention.
