Aquam Corporation Announces Term Agreement with HTC

Natasha Wiseman*
Former Editor of Water and Wastewater Treatment Magazine, UK

Introduction

Aquam Corporation ("Aquam"), a global cleantech firm, has agreed to terms with UK-based HTC Management Services Limited ("HTC"), a provider of water main cleaning of lengths exceeding 1 km per set-up and in-situ relining of existing lead service pipes. This pending acquisition will enable Aquam to immediately expand its product offering in the UK and become a key solution provider to the UK water utilities as they satisfy their requirements to reduce the lead content in potable drinking water as part of the recently announced Asset Management Programme (AMP 6) over the next 5 years.

HTC’s patented process was developed to provide a cost effective solution to significantly reducing the lead content in water without the need of instituting a highly capital intensive process of replacing the problematic lead pipes. The Serline process not only has the ability to clean and dry the pipe, but also has a unique lining system that coats the internal surface to provide a seamless barrier between the water and the lead pipe wall.

Over 10 million homes in the UK are affected by lead water lines across the 22 water utilities in the UK. The HTC technology will be offered through Aquam’s subsidiary Nu Flow, which has secured an initial contract to use the Serline process for 30,000 homes in the UK with a ‘top 10’ water utility and is in discussion with others.

“Aquam is now well positioned to be a leader in the global marketplace to cost effectively reduce the lead content in drinking water and while the UK will be our initial market, this is undoubtedly a global issue,” said Aquam CEO Cameron Manners. “We strive to offer economical and environmentally-friendly solutions for the nation’s most complex and oldest epidemics, lead water service lines and infrastructure renewal.”

In addition to expanding its product offering in the UK, Aquam’s growth plan includes bringing both water main cleaning and in-situ relining technologies to the North American market.

The purchase comes less than a year after Aquam’s acquisition of JD7, Nu Flow and Nu Flow Technologies.

About Nu Flow

Nu Flow is the global leader for the small diameter pipe lining industry. Nu Flow installs innovative, non-invasive, eco-friendly technologies for the restoration of failing pipe systems. Nu Flow is the only small diameter pipe lining company to provide dual lining technologies from a single source and is master licensee for the longest time-tested small diameter epoxy lining in North America. Pipe rehabilitation applications include but are not limited to residential complexes, commercial multi-story structures, industrial and government facilities, hospitality and medical facilities, oil rigs, maritime vessels and underground utilities. For more information, visit www.nuflowtech.com.

About Aquam Corp

Aquam Corp is a global cleantech firm that provides infrastructure support, rehabilitation and diagnostics solutions for water infrastructure. Aquam, which is headquartered in San Diego, USA, uses environmentally friendly technologies to address the world’s aging infrastructure problems. Aquam Corp is the parent company of world-leading small-diameter pipe lining technology manufacturer Nu Flow Technologies, pipe lining installer Nu Flow and global pipeline assessment and inspection technology provider JD7. All services are available in North America, South America, Europe, Asia, Africa and Australia. For more information, visit www.aquamcorp.com.
