Cancer Background

During this century, cancer has become one of the major problem and diseases which has caused predominant death and it will even surpass heart diseases. Many of the researchers begin to use the term lifetime risk for cancer patients which refer to the time that cancer will progress and developed or the time that the patient will die because of cancer. Cancer dose not refers or represents only one disease but it is a group involving about 100 diseases. Cancer is characterized by two things. Firstly there is no control for the growth of cancer cells and secondly is the ability of the cancer cells to metastasis and migrates from the original site to different parts of the body. There are two types of tumors which are malignant and benign cancer. Cancer can attack any person and its occurrence increases as the age of the individual increase too [1,2].

Open Access Journal Role in Overcoming this Tragedy

Open access will play an enthusiastic role in progress and grown up of exchange of experience and this will mainly leads to knowledge grows i.e., as a result of sharing. And this is the main goal for every research in the world i.e., growing up of knowledge [3]. Therefore open access journals role consider the most important specifically for those

who work in the field of cancer treatment since all of the open access journals are working to increase their experience relating with cancer treatment which will lead to surmount of cancer and this is the main objective for OMICS Group i.e., help in overcoming cancer in this century since this group publish high quality of open access papers. Moreover OMICS Group is working to spot light on new medical points which may other open access websites do not focus on.

Conclusion

Open access journal consider as a novel way in improving and developing the knowledge of cancer treatment by increasing exchange of medical information and OMICS group consider as a very supporting group for such new knowledge exchange way i.e., open access journal.
