## Editorial Note

The governments all over the world are trying to reduce the risks of transmission and control the spread of this highly infectious virus that is making its way out and has infected almost 30,055,710 people according to WHO (up till Sep 18, 2020). Developed and developing countries in Asia confronted this pandemic before any other country as China reported the very first case on 31st December 2019. Developed countries (China, South Korea, Japan) got successful in suppressing the rise in COVID-19 cases while developing countries like Pakistan and India affronted many challenges during this pandemic due to lack of enough management and facilities.

A tale COVID, assigned as 2019-nCoV, rose in Wuhan, China, toward the finish of 2019. Albeit numerous subtleties of the development of this infection, for example, its birthplace and its capacity to spread among people stay obscure, an expanding number of cases seem to have come about because of human-to-human transmission. Specialists right now perceived that there are seven kinds of COVID-19 that contaminate people 229E (alpha Covid) NL63 (Alpha Covid) OC43 (Beta Covid) HkU1 (Beta Covid) Rarer strains that cause more extreme entanglements incorporate MERS-CoV, which causes Middle East Respiratory Condition (MERS), and SARS-CoV, the infection liable for serious intense respiratory disorder (SARS) In 2019, a new strain SARS-COV-2 was observed which is responsible for COVID-19 disease. The principal instance of the Coronavirus is revealed in China on 31 December 2019. Also, Coronavirus cases are accelerate by china and on 1 February the Coronavirus cases reached the pinnacle as 151 52 cases were reported the same day. 2442 individuals have passed on of the malady as of Feb 23. According to the Chinese health authority among these expired patients, most were old and two-third was males however complete information has not been announced. That's why China is one of the nations which got affected by the Coronavirus. In Singapore, the first case was revealed on 23 January. Given its eminent medical services framework and its chronicle record in dealing with the 2003 SARS emergency Singapore had

been believed by numerous individuals that Singapore defeats the COVID-19 pandemic difficulty. However, regardless of these desires, COVID-19 disease levels have taken off in Singapore and it presently is one of the most seriously affected nations on the planet first case of COVID-19 was reported in Japan on January 14, 2020. The vicinity of Japan to China, the high travel volumes between the two nations, the high level of matured people in Japan, a high populace thickness in metropolitan zones, for example Tokyo, Osaka and high volumes of suburbanites in these significant urban communities made Japan particularly defenseless against this pandemic (in principle). Disregarding these weaknesses and the normal higher introduction rates, the nation has had the option to smother the underlying spread of the ailment by leveling the bend and decreasing the number of viruses and passing's Although some admonish and point out that, proper testing has not been done in Japan and that the number of tainted cases might be higher than the cases that are officially announced. So Japan is one of the countries in which fewer people died from Coronavirus. In South Korea, the first case was reported on January 20. These developed countries with extensive use of technology and Good governance successfully tackle the COVID 19 situation while in developing countries such as in India the main instance of Coronavirus was appeared on second march 2020. COVID19 impacts an enormous no of individuals in this nation, and the death rate is additionally increasing day by day. 86752 deaths are affirmed in India as of 20 September. In Pakistan, the primary instance of Coronavirus was confirmed on February 26, 2020. Pakistan is additionally affected by Coronavirus and in Pakistan, 6416 deaths are affirmed as of 20 September developing nations are more influenced by the Coronavirus when contrasted with developed nations because of the absence of facilities, awareness, and so forth. What's more, in this country people have not kicked the bucket just from Coronavirus but also from poverty. The world is going through a big crisis right from the start of the year 2020. The countries are trying their best to somehow wipe out this coronavirus.
