### Editor Note

It is recognised that materials science, technology and engineering are an important and inter/multi-disciplinary subject areas. It's exhibited that theory and truthful information in the text books does not often provide useful information for learning and use for citation. Thus, it was a pressing demand exemplifying research outcomes in an article form could be advantageous to enrich learning process in understanding fundamental concepts to applied applications of materials sciences and engineering. To this effect, beginning in 2012 we formally launched the Journal of Materials Sciences and Technology (JMSE) and proceed to issuing quality articles through rigorous and quick review processing schemes. Last four years, it have been observed that the journal is considering huge potential, which we measured through its citation triggering resulted high impact fact.

The Journal of Materials Sciences and Engineering has seen significant changes in 2016. While its aim focusses on the subject matters, but we have expanded its scope and aim, make a good databased for a list of reviewers, restored the editorial board and streamlined the submission process including on-line submission. Thus, the submission rate for the manuscripts is significantly enhanced. Most satisfying is the significant increase in the impact factor of the journal to 5.447. It is an

evidence and noticeable improvement from previous years. The credit for this success goes to the high quality submissions from you, our contributors, readers and our editorial board and staff. Additionally, our editorial team remain committed to work hard for continuing to improve the quality of submissions, organise reviewing timetable and reduce the manuscript handling time that required for the review process. We believe this change should reduce turnaround time from manuscript submission to final decision on acceptance or rejection significantly.

As we forward-thinking, move ahead and build on our success, we would appreciate feedback from you, the readers of and contributors to the JMSE. Hence, you are encouraged to contact the Editors or the journal coordinator on any aspect of the journal. Your input is, as always, highly valued as it helps us improve further the quality of our offering.

In summary, on behalf of the Editorial Board, I would like to take this opportunity to thank everyone who has contributed to the JMSE in various capacities, and to urge you to continue submit your research findings (inputs) to publish in the journal. Your cooperation will be highly appreciated. If you have any questions or suggestions, please directly email to me or journal coordinator at: [editor.jme@omicsonline.org](mailto:editor.jme@omicsonline.org). I look forward to hearing from you.
