Universal influenza vaccine is proposed and under development. Universal vaccine seems not to be payable for many people in developing countries, (dangerous pandemics usually start at developing countries from bird influenza). Artificial pandemics by infectious attenuated live vaccine are proposed. Ferret nasal mucosa is carcinized using carcinogen for easiness of incubation. Bird influenza virus is attenuated by reverse genetics. The virus is marked by green fluorescent protein. This attenuated virus is sprayed to many cultured cancer cell specimen incubated. In some specimen attenuated virus will mutate to increase in cancer cells, checked by green fluorescence. Then the virus is tested to infect ferret and then human volunteers without serious syndrome. Virus with strongest virus titer to infect ferret is selected as seed virus of infectious attenuated live vaccine.

The seed virus will be increased in incubated cancer cells by bioreactors everywhere throughout the world and sprayed to vulnerable people, e.g. soldiers, students, people in slams, medical staffs and people engaged in lifeline. Artificial pandemics of dangerous virus as H7N9, H5N1 etc. are to be made serially with few people in developing countries from winged animal flu. Artificial pandemic should be initiated before wild type pandemic starts. One reason is to avoid reassortment (mixture) of RNA may happen in patients’ cell infected to both of them simultaneously. It should avoid influenza season of winter as well by the same reason. If infection is done intensively, artificial pandemic will be finished within 2 month all over the world. Artificial pandemic happens as people have no immunity against it. Resultantly, they will obtain basic immunity to the virus. So wild type outbreak of pandemic does not occur. Even if wild type human to human transfer occurs, the scale is of extremely small. It should not overlap with wild type outbreak. Artificial pandemic will not increase virulence as 1918 Spanish influenza did during long period of transmission. Especially vulnerable people, e.g., soldiers, students, people in slums, medical staffs, and people engaged in lifelines, policemen, firemen, and officials of politics are to be eagerly infected by spray of live vaccine virus on the nose. As Infectious Live Attenuated Vaccine is incubated in nasal mucosal cancer, airborne transmission seems to be dominant and strongly infectious between people. Method to increase infectious attenuated vaccine and to distribute all over the world. Quality of Infectious attenuated live influenza vaccine candidate virus is to be distributed to many people. Artificial pandemic happens as people have no immunity against it. Resultantly, they will obtain basic immunity to the virus. So wild type outbreak of pandemic does not occur. Even if wild type human to human transfer occurs, the scale is of extremely small. It should not overlap with wild type outbreak. Artificial pandemic will not increase virulence as 1918 Spanish influenza did during long period of transmission. Especially vulnerable people, e.g., soldiers, students, people in slums, medical staffs, and people engaged in lifelines, policemen, firemen, and officials of politics are to be eagerly infected by spray of live vaccine virus on the nose.
