

Journal of Case Reports

Gattu Praveen Kumar*

Department of Anatomy, Sri Muthukumaran Medical College Hospital and Research Institute, Chikkarayapuram Chennai, India

The Journal of clinical case reports (JCCR) peer review journal that publishes Novel research work conducted as case reports in the medical field covering various types of diseases, diagnosis of the patients. The Journal is an open access that gives a unique and friendly approach to medical practitioners and researcher.

Each case report is well refined and highlighted by the expert committee, in which highly reputed international experts have made special comments and guidance on the respective cases.

JCCR would be the first choice for publishing and if their paper was not accepted, only then would try another journal. JCCR is using editorial tracking system for quality in review process. The submitted

manuscripts are reviewed by expert members and editorial board members of JCCR and also reviewed by the external expertise.

I have very much appreciated ready cases and I would highly recommended this journal not only to specialty training students but also to all general practitioners in all fields due to its update with latest evidence based information.

As the JCCR is an open access for all kind of information become more readily available on internet.

Finally I wish all best wishes JCCR to publish more versatile case reports.
