Market analysis: Hypothyroidism is prevalent in all parts of the world. Developed countries mostly suffered due to autoimmunity or congenital hypothyroidism and developing countries get suffered mostly due to iodine deficiency in the diet. This shows an increase in demand and need of novel therapeutics and providing a base for Thyroid Deficiency Treatment Market. Trends also direct towards an increase in hormone-related disorders these days. Thus the estimate of medication intake will boost the thyroid deficiency treatment market. The diagnostics and pathology segment is also improving in the developing countries nowadays which grow the therapeutics market. The research and development activities in the field like emerging novel therapeutics, increasing the efficacy of medicine and reducing allergic reactions would be the cutting edge for the market progress. Selling campaigns initiated by the global players is increasing the market progressively.

Recent epidemiological data from WHO suggests that there are more than 750 million cases globally with a thyroid disorder. Increasing focus by government organizations and private agencies like WHO and pharmaceutical companies to create awareness of thyroid deficiency are fuelling the market growth. Levothyroxine and Cytomel are the most selling drugs in the thyroid deficiency treatment market.

Thyroid disease is reasonably common, in New Zealand and in the world. Worldwide, the number of people suffering from some form of thyroid condition is estimated at 200 million. According to the 2006/2007 New Zealand Health Survey (Ministry of Health), 113,200 people in New Zealand over the age of 15 years had a thyroid condition (as diagnosed by a doctor) in that period. The survey results do not provide numbers by type of thyroid condition.
