[Psychiatry](#) includes various levels of mental health conditions starting from [neuropsychiatry](#) to general psychiatric conditions to psychological health. Psychiatry meetings try to focus on all these mental conditions focusing on all the states of mind. [Mental health](#) includes our emotional, psychological, and social well-being and it helps us to determine how we handle stress and make choices.

According to a new report by Reports and Data the anxiety and depression treatment market may reach to USD18.90 billion by 2026. In the year 2018, three hundred million people of all ages were suffering from depression. There are 800,000 incidents of suicides within the same year, the explanations behind that are primarily depression and anxiety disorders. Such an increase within the incidence rate of depression and anxiety is one among the main factors driving the world psychological disorder and depression treatment market. 2017 share of global population with any mental health or substance use disorder is 13% (970 million), depression is 3.4% (264 million), anxiety disorders is 3.8% (284 million), bipolar disorder is 0.6% (46 million), eating disorder is 0.2% (16 million), schizophrenia is 0.3% (20 million), alcohol use disorder is 1.4% (107 million) and drug use disorder is 0.9% (71 million).

'Mental illness' and 'Mental disorder' are the terms used to describe a spectrum of mental health and behavioral disorders in Australia. National Survey of Mental Health and Wellbeing was started in 1990 in Australia. The role of this survey is to measure the number of population and the amount of disability with mental health disorders and mental health services used by the people. The importance of fine mental state and its impact on Australians have long been recognized by the Australian government and every one state and territory governments. Over the last three decades, these governments have worked along, via the National Mental State Strategy, to develop mental state programs

and services to raised address the mental state needs of Australians.

In 2015-16, Australian Institute of Health and Welfare was estimated that around \$9.0 billion or \$373 per person was spent on mental health-related services. Out of 9.0 billion USD \$5.4 billion (59.8%) was funded by state and territory governments, \$3.1 billion (35%) were funded by the Australian government and \$466 million (5.2%) was funded by private health insurance funds.

[32nd International Conference on Psychiatry and Mental Health](#) at [Brisbane, Australia](#) during **June 22-23, 2020** is going to consign an extraordinary program for exchange of ideas and authoritative views by leading scientists which covers the entire spectrum of research in psychiatry, psychology, psychiatric disorders and share the cross-cultural experiences of various treatment procedures. The central aim of the event is to spread the current research, innovations, advance techniques and strategies in improving mental health and psychiatric health.
