The conference was embarked with an opening ceremony followed by a series of lectures delivered by both Honourable Guests and members of the Keynote forum. The adepts who promulgated the theme with their exquisite talk were:

Hilaris Conferences offers its heartfelt appreciation to Societies and Organizations and is also obliged to the Organizing Committee Members, adepts of field, various outside experts, company representatives and other eminent personalities who interlaced with Hilaris Conferences in supporting and making the conference as never before one.

PaintingS are interpreted in anatomical aspect and compared to the anatomical drawings of Leonardo da Vinci. The comparison reveals the similarity between the details of this painting and Leonardo's anatomy.

Sandoval in their research article evaluated Mini Chromosomes Maintenance Complex Binding Protein as an Alternative Breast Cancer Cells Proliferative Marker to Monoclonal Ki67.

Macchiavello-Macho RA investigated about in relation to the published work "Michelangelo and Noah's Liver: A Hidden Anatomy Lesson?", I have been asked to make a review of the aspects that relate Michelangelo to anatomy. Let me start by asking some questions: Who was Michelangelo?.

Sotirios K has commented through a commentary saying that it has been almost 60 years since the ansa pancreatica was first described by Dawson and Langman in a rather innovative study based on radiographic evaluation of the intrapancreatic ductal configuration in cadaveric subjects. The proposed incidence, based on 120 subjects, was 21%. Undoubtedly a percentage high enough to raise an interest on this anatomic entity. But what does the ansa pancreatica represent?
