Scientific publication is the most important scientific tools for the exchange and publication of knowledge and information especially in the recent progress of the internet, online publication and methods of rapid communication via satellite as video conferences. The scientific publishing houses have become responsible for dissemination of science and culture across many different scientific journals specialized in different branches of science.

The researchers compete to publish their results of researches in scientific journals with a high level of impact factors and prestigious reputation to facilitate them to speed publication of the scientific topics.

In developed countries, scientific studies and research through scientific projects were supported from governments and the various scientific organizations which provide huge budgets for research and publication of scientific results and scientific publishing containing complementary to scientific work. However, in the developing countries; students and researchers in most of the scientific institutes

carrying out their research without any funding, no budget or any item for publication of scientific researchers.

The scientific publishing houses make way for young scientific researchers in developing countries to publish their research free without any distinctive even the open access publication, to melt even the great scientific differences between the various countries of the world. And also provides an opportunity for scientific cooperation projects, a partnership and conferences aimed at human progress and prosperity.

It is possible for publishers of scientific distinctive to cover some financial resources through advertising deals for veterinary companies and medical supplies, also the announcement of conferences, workshops, and scientific world. So it must be seen to the selective good articles that have thought of a good and clear scientific objective, which leading to increased demand for the preparation of journals and research purchased, and could also increase the income and expenses of publishing and here the role of editor of the scientific journals.
