Ream Model to Evaluate the prevention and delay of Disability care program construction

Jiashun Wu

School of Nursing,National Yang-Ming University

Abstract:

Combining the power of industry, government, academia and people, we will jointly build an integrated community support network for preventing disability and delaying dementia to develop a powerful solution module for "smart living" to prevent and delay disability care: a 12-week muscle strengthening exercise program Resistance training, the case will be accompanied by cognitive promotion, life function reconstruction training, social participation elements, and the use of a "healthy passbook" community support network. Disability is basically a diseases state and absolutely falls under clinical framework and Essentially a problem focusing on the Individual as a deviation from the Norm.
