

Scientology applied to the workday of women feels just as good as sex: Non clinical examination of less sunlight habit Pharmacy Institute in Pune University

Rahul Hajare

Associate Professor, Pharmaceutical Medical Chemistry, Pune University, Pune, India.

Abstract: Poor and poorest can desire for sex. Open day meditation has the same effect on our brains as sex. 20 new normal orgasms in a research row and affordable in all color of skin. Orgasms can a sexual event, which has attained at the culmination of a sexual activity. However, not all orgasms have derived from sexual activity to extended act. There are other activities, beyond sex, that also give the same feeling as an orgasm. Meditation can accept surprised to note that meditation has the same effect on our brains as sex. In both cases, there is a rush of blood to the pre-frontal area by side brain. Sex and meditation both lead us to a state of bliss and lack of self awareness. Sexual context become immune to our thoughts, desires, worries, pain and other worldly feelings. The only difference between a sexual orgasm and a meditation led one has that while the former gives us physical delight; the latter has spiritual in experience. Coregasms Orgasms can achieve by non-sexual and non-meditative activity performance smart co worker. First study in India found that 40 per cent of women experience orgasms during crunches and workout like planks. Twenty per cent of the women reported that they achieved orgasm at times when they were practicing yoga in front of male trainer. Some women reported experiencing sexual pleasure while horse riding, swimming and cycling. This probably has to do with blood rushing to the pelvic areas while doing these exercises. Delivering a child women have been reported to experience sexual pleasure during the childbirth process, childbirth process stimulates the same spots that would be activated during sexual intercourse. A lot of beta-endorphins, prolactin and oxytocin omega has released during delivery, which give the new mothers a sexual-orgasm like experience. Sleepgasms has 37 per cent women had orgasms in their sleep. It has conjectured that there may be an increased flow of blood in the pelvic area during the REM of the eye when women are asleep. This phenomenon, when combined with brain being shut down, can result in an orgasm.

Biography: Dr. Rahul Hajare, After his Ph.D in Pharmacy from VMRF Salem which he completed with flying colours, he is fortunate to work NARI primer HIV research Institute to complete Post Doc under the of World Renowned Scientist Respected Dr. R.S.Paranjape., Retired Director & Scientist 'G' National AIDS Research Institute Pune. Dr. Rahul Hajare has Associate Professor of Pharmaceutical Medical Chemistry to Pune University (until 2020), Graduated from Amravati University in 2003, after an assignment he worked as an M.Pharm Scholar in the Institute of Pharmaceutical Education and Research passed with distinction, he has Post Graduate Teacher for Master of Pharmacy, he has more than 30 scientific and methodological works, 3 patents of scientific research.
