

Ten minutes eliciting interview promote the uptake of HIV test and sexual network analysis through referred sexual partners of men who have sex with men

Piaoyi Chiou

National Taiwan University, Taiwan

Abstract

Men who have sex with men (MSM) tests for HIV often self-recognize when they have been exposed to unsafe sexual behavior and many sexual partners. It would therefore be important to include the sexual networks to the HIV testing campaign. The study aimed to elicit and deliver the HIV test to the sexual partners of MSM who received HIV pre-test counseling and discover the unknown link of sexual network. Recruitment was done through purposeful and snowball sampling. A ten minutes structured personal risk network interview was conducted to elicit the referral of sexual partners within three months. An anonymous HIV quick test was delivered at a time and place where convenient to the sexual partners.

Biography:

Paioyi Chiou has completed her PhD at department of Nursing, National Yang Ming University, Taipei, Taiwan and visiting research at Sheffield University, UK. She is the assistant professor and member of the council of many Taiwan's AIDS related NGOs and Society. She also volunteered in many AIDS social welfare agencies to provide care for community AIDS/HIV+ patients. Her research on contact tracking and partner notification, emerging HIV testing strategies, has been applied to Taiwan's HIV screening policies and indicators.
