

The condition of Peoples and their education in Backward Areas of PAK

Saqib Ullah

University of Lakki Marwat, Pakistan

Abstract

The situation and mentality of the peoples in Pakistan's backward areas are miserable, due to gun culture killing human being is their favorite game. Shortly in that areas we started our campaign on to work over the youth for as they are the future. It was in fact very difficult to start work as an organization at the area where peoples consider the NGOs as the agent of the western ideology, people usually told their children to keep away from organizations etc so to handle these hatred situations and to create soft image in the eyes of people I talked to many social welfare organizations and different Charity trusts to help the needy and poor peoples of that area as because the main reason of their conservative mentality is that they are below line of poverty and they are living like slaves of the landlords and politicians due to lack of awareness. So after that session of helping people financially and to make their very small needs full which they were expecting from their politicians yearly we started plantation campaign in different schools, streets and even in the houses of that area after that we started next session of seminars in different schools and colleges of that area to aware our youth the importance of education and awareness regarding their rights and duties towards the society. As there is very less tolerance in that area so through these seminars we also worked to promote tolerance for this we requested members of another organization "Together for tolerance". Now a days many students that were trained by have sent their sisters to schools and they have become model for their society. The students are going increase day by day even girls are taking admissions in the newly established university of that area.
