Abstract
The convergence of nanotechnologies generates synergies among different technologies to say, nanotechnologies, neuro technologies, computers and biotechnologies, the setechnologies must converge in their regulations, the application of medical devices in nanotechnologies should lead us to a link between the technical committee TC 210 and ISO technical committee 229 link that does not exist in our work in this moment. In this do an analysis of the management of risk from an optical NC-ISO 14971. Studying the global trend in this respect as imported for manufacturers medical Devices worldwide.
