

Editorial Highlights of Journal of Neurological Disorders

Athanasios K. Petridis

Department of Neurosurgery, University of Schleswig Holstein, Germany

Editorial Note

I am delighted to introduce the a rapid peer reviewed journal which is a valuable source of information for scholars, researchers, professionals, and students, providing in-depth perspectives on intriguing contemporary topics with an ethos of openness, we are passionate about working with the global academic community to promote open scholarly research to the world. I am pleased to announce that, 7 issues of the Volume 8 were published online well within the time and the print issues were also brought out and dispatched within 30 days of publishing the issue online during the year of 2020.

The major objective of JND is to publish up-to-date, high-quality and original research papers alongside relevant and insightful reviews. The Journal aims to flourish and to maintain the standards in Neurological Sciences (Neurosciences, Neurology, neurosurgery, Psychiatry) and practices, providing an excellent platform and opportunity to present evidence based research, reviews, case studies that probably are much in deed for students, professors, and aspiring researchers.

Average download per article is increasing and on an average there are 10 downloads per paper. All these are promising signs. We could reach this stage through the constant support of Board Members and intellectual generosity of the readers and contributors (authors and reviewers). I take this opportunity to acknowledge the contribution of Editor: Danny Richards, during the final editing of articles published and the support rendered by the editorial assistants in bringing out issues of JND in time. Lastly I would like to express my gratitude to all the authors, reviewers, the publisher, the advisory and the editorial board of the Journal, the office bearers for their support in bringing out yet another volume and look forward to their unrelenting support for the successful release of upcoming editions.

JND considers only the first research work that has neither been published elsewhere, nor under process of reviewing for publication. JND deploys authenticated software tool to detect similar and overlapping of data within the submitted documents. Information that's found to own been plagiarized from the manuscripts of other authors would be summarily rejected, involving thorough changes as suggested by the reviewers.
