

# Introduction to Journal of Genetics

**Addisu Amira**

*University of Los Angeles, California*

“Journal of Genetics and Genomes” is an open-access journal which deals with the publication of the topics related to wide varieties of the genetics research fields such as Genomics, Epigenetics, Chromatin Biology, Genetics and Evolution, Gene Therapy, Cancer Genetics, Applied Genetics, Pharmacogenomics, Functional Genomics, Immunogenetics, Plant Breeding, Plant genetics, Plant physiology, Plant pathology, Plant development, Genetic Epidemiology, Clinical Informatics, Public Health Genetics, Developmental Genetics, Cytogenetics, Population Genetics, Biochemical Genetics, Human Genetics, Medical Genetics, Behavioral and Psychiatric Genetics, Genetics of Aging, Neurogenomics, Genomic Endocrinology, Systems Biology, Statistical Genetics and Methodology, Bioinformatics and Computational Biology, Genomic Assay Technology, Toxicogenomics, Nutri-genomics, Pharmacogenomics and Epigenetics and Epigenetics, RNA, Stem Cell Research. It has a very systematic way to work on the publication of the particular paper.

This journal has an editorials board which has its member involved from different parts all around the globe. The member involved from different countries across the world provide the opportunities for the published article to be verified by the different and unique thinkers to evaluate the manuscript and thus, results in the very precise decision making towards the improvement of the submitted manuscript as well as the development of the journal among the above research fields. When it comes to the improvement in the quality of the submitted manuscript then we have a peer- review group which consists of the members that would go through the submitted manuscript and would provide us with the remarks that can lead to the enhancement in the quality of the paper.

One of the most positive point of this journal is it publishes the articles online without any restrictions as well as without any subscription thus, automatically targets the wide range of readers all over the world. Our aim is to always complete the articles within its given time limits which is approximately of 28 days.

Our journal is a monthly publishing journal. Hence, it always tries to keep its regularity with all the seriousness as well as exposing a depth of the particular research field. As our journal has recently published the articles which deals with the effects of the chemically modified food substances in our immunity while other discusses of how the corona virus have its multiple forms from decades that we were unknown to and some makes us to remember the health hazards that we need to take care

off while performing the practical activities while in the laboratory.

Thus, this journal tries to reach to the every corner of the genetics and genomes research fields and to enlighten the readers with the facts that we are known to but are not considered by us while doing our research work. As it can be seen through the publications that we also try to involve all the latest and the most heated topics to our journal as to make it well recognized by the readers and thus, making it to trend it among the researchers as well, as to encouraging them to work with our journal by contributing through their work.

The latest topic discussed by one of the articles submitted to our journal is the “Reverse Transcription of Corona and other RNA viruses” and the remarks it got from the reviewers are stated below:

- This article has discussed the hottest topic of this decade which is the Reverse transcription of the corona virus and other RNA viruses, that would surely lead to the acknowledgement of the depth of the earlier studies related to this topic.
- Have also discussed the different types of mechanism adopted by the organisms/viruses to complete their reverse Transcription.
- This discuss have included the studies that had been published from the earliest years of research work to the most recently published research works which would lead to the accurate complying of the related research facts in a most precise and brief manner.

Thus, it is amongst one of the articles that had got most positive responses from the reviewers and were supported on very solid grounds for the publication.

However, our journal also tries to promote the published articles on the various well known platforms so that it can reach the large number of readers and help in the welfare of the human kind on a greater level.
